

# IDEATION PHASE

## Define the Problem Statements

**Project Name:** AI BlogNest API

**Team ID:** SWTID-2026-6999

**Date:** 20 September 2026

**Maximum Marks:** 2 Marks

Customer problem statements were framed using the empathy-mapping format below — I am / I'm trying to / But / Because / Which makes me feel — to capture the perspective of the primary users of the AI BlogNest API from two different roles: a content creator and a blog reader.

### PS-1: Content Creator

| PS No. | I am<br>(Customer)                         | I'm trying to                                                                        | But                                                                                | Because                                                                                                | Which makes me<br>feel               |
|--------|--------------------------------------------|--------------------------------------------------------------------------------------|------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------|--------------------------------------|
| PS-1   | A content creator who manages blog content | create and manage blog posts efficiently and organize them using categories and tags | creating quality content, summaries, and managing different blog stages takes time | the existing process requires considerable manual effort for writing, organizing, and managing content | <i>frustrated and time-consuming</i> |

### PS-2: Blog Reader

| PS No. | I am<br>(Customer)                             | I'm trying to                    | But                                                                                                   | Because                                                                     | Which makes me<br>feel                                           |
|--------|------------------------------------------------|----------------------------------|-------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|------------------------------------------------------------------|
| PS-2   | A blog reader looking for relevant information | find useful blog content quickly | traditional search may not return relevant content when different words are used for the same concept | keyword-based search depends heavily on matching the words used in the blog | <i>frustrated and unable to find relevant information easily</i> |
